## **Verizon Modem Router Ip Address**

If you think about it, everything we own will be stale the day after it was created (or earlier).. Also over night I called Tech Supported and told that they do not do any MAC filtering, and all that is needed is a router that would do DHCP on WAN port, which makes me (it a Belkin N300).. Would it be that easy, as I pull Ethernet from the Fios router in the rearguard.. Then enter a password (enter username and password and save it for future reference).. Future logins do not need these steps, except when the gateway is reset to factory settings.
